FIG. 1 illustrates a surgical procedure for ligament reconstruction in a knee joint. A graft 100 is shown being inserted into the joint space. The graft is secured to the femur (labeled 115) via sutures 80 and 85. It passes through a tunnel 130 in the tibia, which is created using a retractor system 105. The graft's end is secured at 250 and 260. A tensioning force is indicated by an arrow labeled "TENSION".
